DETAILED ACTION

1. Claims 1-31 are pending and under consideration.

Claim Rejections - 35 USC § 112

2. The following is a quotation of the first paragraph of 35 U.S.C. 112:

The specification shall contain a written description of the invention, and of the manner and process of making and using it, in such full, clear, concise, and exact terms as to enable any person skilled in the art to which it pertains, or with which it is most nearly connected, to make and use the same and shall set forth the best mode contemplated by the inventor of carrying out his invention.

3. The following is a quotation of the second paragraph of 35 U.S.C. 112:

The specification shall conclude with one or more claims particularly pointing out and distinctly claiming the subject matter which the applicant regards as his invention.

4. Claims 1-31 are rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention.

The claims are drawn to a method and kit for detecting secreted antigens in a sample without substantial replication of mycobacterial cells.

It is unclear what are the metes and bounds of the term "substantial replication". The specification teaches that "without substantial replication" is used to indicate that the subject cells have not been subjected to conditions conducive to "extensive replication" (page 27, lines 12-17). However, the specification does not define the metes and bounds of "extensive replication". Therefore, it is unclear how much replication constitutes "substantial replication".
